

# TESTIMONIALS

## SCHOOLS

### **Michael Catterson, MS, LAT, ATC Head Athletic Trainer-Jenks High School (Tulsa, OK)**

ATS was great from start to finish in the services they provided. From our initial meeting and through the planning process, David and his staff were easy to work with. Before and after the event, we received nothing but positive feedback from the parents of our student-athletes. Being able to offer these services, at a reasonable price, was a big selling point for our parents. I would 100% recommend this service to any of my colleagues.

### **Lane Green, District Athletic Director - Blue Valley School District (Overland Park, KS)**

ATS is providing a tremendous service by providing our student-athletes affordable and convenient testing for undetectable heart conditions. Through the heart imaging and other tests, parents can obtain information on their child's physical condition that can't be achieved thru the typical pre-participation physical exams. ATS does all the heavy lifting; signups, setup, and testing. As a district athletic director, all that was required to do was secure a location for testing and provide information to the building athletic directors and coaches. This is a great program that all school districts should take advantage of.

### **Matt Johnson, District Athletic Director (former) - Shawnee Mission School District (Shawnee, KS)**

I enjoy working with David and Eric from ATS. The service they provide is necessary, credible, and to be honest, lifesaving. ATS performs these simple and non invasive tests in a secure and stress free manner at a fraction of the cost of having them done through your doctor. And what you get in return is a level of peace of mind that you can't put a price tag on. I believe this to be a service that every school in America should take advantage of.

### **Steve McCarthy, Athletic Director - Casady School (Oklahoma City, OK)**

ATS did an incredible job for us here at Casady School. The communication, preparation, and planning with David and his crew was thorough. We had 104 students sign up to be screened over two days on the Casady campus, and ATS was professional and organized during the entire process from setup to take down. Each of the ATS members was personable and easily engaged with the children and their families. I have heard many positive reviews from our parents and students so this is something we hope to do every year. Thank you to the ATS crew for all they did at Casady School.

## PARENTS

We did this heart check last fall for our 16 year old XC runner. She had a small hole in her heart as a baby and we had been assured it was closed over the years. No murmur was ever detected. We decided to do the ATS Heart Check for peace of mind. It was the best test we could have spent money on. Not only did they detect an abnormality, but also learned the hole in her heart (an ASD), is not small, nor could it be closed in the cath lab. She will be having open heart surgery in July. If this had gone undetected, she could have suffered heart stress during her future pregnancies and had severe heart problems in her fifties or later. Thank you for offering this screening. We will be forever grateful!

**Tracy S.**

Brandon ended up having two extra electrical pathways on the left side of his heart along with one on the right that needed to be removed. The cardiologists had to speed up his heart during the surgery to map out the abnormal electrical pathways you found when we had him screened at school by ATS. He's recovered really well. The cardiologists said these tests probably saved his life because he wouldn't have made it through ROTC Military Physical Competitions scheduled next year having WPW. The \$99 we spent on the tests from ATS is the best \$99 we've ever spent and ever will spend! Thank you, thank you, thank you!!! We feel so lucky and blessed the school district had ATS to do the screening!

**Stacy D**

I wanted to send an update to you about my daughter Grace. She just had open heart surgery to fix the half dollar size hole in her heart last Wednesday at Children's Mercy. Every surgeon and cardiologist that we talked to said she would need a transplant in 4 to 5 years because of the damage being done to her heart by the hole. This test saved her life and we are forever grateful. We will be advocates of this testing continuing. If there is anything that you know that we can do to help, please let us know.

**Thanks, Angie**
